

Rail and Transit Planning

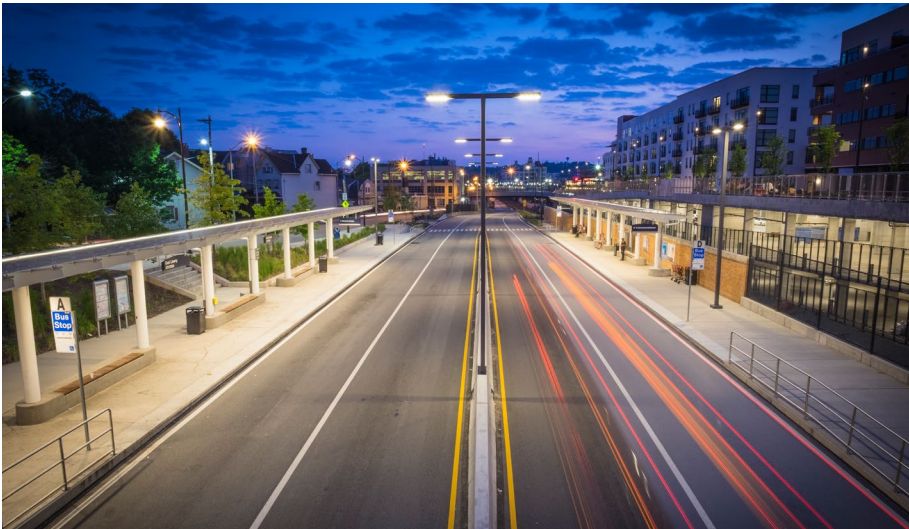

As an industry leader in rail and transit services, Michael Baker International understands the intricacies of moving people and goods safely and efficiently and successfully develops important modes of rail and transit transportation to meet today's challenges.

Enhancing the Safety, Mobility and Quality of Life for Our Communities

With completed projects across the country, our expertise encompasses everything from station area facility plans to design of freight rail yards. Our work has included feasibility studies, ridership forecasts and supporting our client's studies and applications under Federal Transit Administration (FTA) and Federal Railroad Administration (FRA) programs. Our successful development of the important modes of rail and transit transportation always includes comprehensive planning, with the end goal of implementation, as evidenced by the 40 transit and rail passenger stations our team successfully delivered on the east coast alone.
